Proteomics Specialist I/II/III

Summary of Open Positions:
The Proteomics Center of Excellence and Core Facility at Northwestern University (PCE) has multiple openings available for highly qualified, highly motivated applicants for the position of Proteomics Specialist. The PCE is a collaborative university research center with strong ties to the translational research infrastructure at the Feinberg School of Medicine in downtown Chicago and across the country through the National Resource for Translational and Developmental Proteomics.

Research Environment:
Successful applicants for these positions will be expected to work well as both a leader and a follower in a team environment and demonstrate the ability to work diligently and independently toward tangible, hypothesis-driven or discovery research goals on multiple biomedical projects. The Proteomics Specialist will participate in the design and execution of research plans under the direction of the center leadership. We are currently looking for staff with experience in Top-Down proteomics, targeted proteomics (SRM/MRM), quantitative proteomics, glycoproteomics and phosphoproteomics. Prior experience in one or more of these techniques is strongly preferred, but not required for highly qualified applicants. If selected for this position, you will immediately be immersed into a dynamic research environment with >10 high-end Fourier transform mass spectrometers and all of the support equipment that one would need to be successful. In addition to mass spectrometers, successful applicants will be familiar with multidimensional liquid chromatography, electrophoresis and bioinformatics. The Proteomics Specialist will analyze data and present interpretations in group meetings as well as prepare manuscripts for collaborative publications in peer reviewed journals. The Proteomics Specialist will be expected to contribute to grant and report writing within the research center. For those interested in an academic track, traditional postdoctoral associate positions are also available.

Minimum Preferred Qualifications:
Ph.D. or equivalent doctorate with 0-5 years experience;
Demonstrated Leadership Skills;
Strong written and verbal communication skills
